## ACKNOWLEDGEMENTS

I'd like to take this opportunity to thank individually all those who have assisted me in one way or another with my Ph.D project.

First of all, I'd like to thank my thesis advisor, Dr. Paul Milgram of the University of Toronto, for his guidance and support throughout this project. Paul introduced me to the area of Human-Computer Interaction (HCI) and has helped me in every aspect of my education. He has been a true mentor and friend. I am greatly honoured to have had the opportunity to work under his tutelage.

I am also very grateful to the rest of my supervisory committee members: Dr. John W. Senders and Dr. Allison B. Sekuler. John, my academic grandfather, taught me that research is a life-long pursuit and it should never be contradictory to fun and happiness. Allison, a psychologist, reminded me of my professional blind spot and broadened my vision with alternate perspectives. The project would not be completed without their support.

I would like to thank Dr. Haruo Takemura, who provided me insight on implementing the simulation software and resolved my early language problems by using Japanese to bridge the gap between English and Chinese. Dr. Chris Wickens, one of the pioneers in this research area, generously shared many of his research resources with me. I thank him for his assistance and encouragement.

Next there are all the graduate friends I made during these years: David, Maurice, Ming, Caroline, Steven, John H, Shi, Moncef, Herman, Greg, Kit, Weiwei, Jason, Zhonghai, Andrew, Alireza. The time we spent on the running track, badminton court, and local pubs made this long journey an enjoyable one.

I have received support in the form of fellowships and research funds from NSERC, IRIS and the University of Toronto. This research would have been impossible without their generous support.

Finally, I cannot thank my wife, Mu Yang, enough for her love and patience throughout all these years. Her optimism and encouragement have been invaluable at the times I felt discouraged. Thanks for believing in me, even when I claimed my thesis would be finished "in the next two weeks" for nearly a year. I would also like to thank my parents and in-laws for excusing me from many of my family duties and letting me concentrate on my research. Their constant support has been the source of my motivation.
